Venus Remedies unveils new drug

Mumbai, Jan. 18

Venus Remedies has launched CSE 1034 under the brand name 'Elores', which stops the development and spread of bacterial resistance and controls diarrhoea. The drug is designed specifically to target growing bacterial resistance mechanisms and has a unique profile to combat antimicrobial resistance caused by multidrug resistant ESBL producing strains. This product is effective against metallo betalactamases producing pathogens which are not susceptible to most of the existing antibiotics. It is also unique since it not only kills resistant pathogens (bacteria) but also prevents the spread of resistance. — Our Bureau
